

ANTIMICROBIAL

Coated Door Hardware

Protect clients and staff from exposure to harmful microorganisms, bacteria and mold. Antimicrobial clear coating available on any door hardware product or design.

Harmful microorganisms reside on every surface we touch. Protecting high touch surfaces with an antimicrobial coating can interrupt cell multiplication and prevent the spread of infectious diseases. Independent laboratory results show a significant decrease in microbial population on treated surfaces. These coatings are safe, non-toxic and formulated to provide protection over an extended period of time. High traffic or public use areas are ideally suited for antimicrobial clear coated door hardware. Hardware options are available to fit any building use and design.

BENEFITS

- Inhibits the growth of harmful microorganisms, bacteria and mold
- Protects against the spread of infectious diseases
- Retains antimicrobial properties under normal use conditions
- Suitable for healthcare, education, food service, restrooms, retail, office
- Environmentally friendly

FEATURES

- Available on any door hardware product or design
- Applications include door pulls, push plates, hand rails, grab bars
- Superior chemical, stain and scratch resistance
- Can be formulated for exterior durability
